FEB 13 2008

Applicant: Patrice Flaherty Application No: 10/630,402 Filing Date: 07/30/2003 Attorney Docket No: 1066

## IN THE CLAIMS

Please amend claims 1, 7, 24 and 30-32 as follows. This listing of claims vill replace all prior versions, and listings, of claims in the application:

1. (Currently amended) A device for collecting blood from and administering medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluids;

an indicator unit and a-syringe an access port disposed in fluid communication with said main tubing segment in branched relationship to each other at a tubing bifurcation branch, said indicator unit adapted for indicating blood volume;

a clamp operably engaging said main tubing segment and adapted to selectively block and unblock flow of the fluids in both directions through said main tubing segment;

wherein said clamp is disposed upstream of said tubing bifurcation along a flow path of the fluids through said main tubing segment; and

at least one air-permeable membrane provided in said indicator unit.

2. (Original) The device of claim 1 further comprising a blood volumeter

Applicant: Patrice Flaherty Application No: 10/630,402 Filing Date: 07/30/2003 Attorney Docket No: 1066

provided in said indicator unit.

3. (Original) The device of claim 1 wherein said indicator unit is disposed in removable fluid communication with said main tubing segment.

4. (Original) The device of claim 3 further comprising a blood volumeter provided in said indicator unit.

- 5. (Previously presented) The device of claim 2 wherein said blood volumeter is a volumeter chamber.
- 6. (Original) The device of claim 5 wherein said indicator unit is disposed in removable fluid communication with said main tubing segment.
- 7. (Currently amended) A device for collecting blood from and administering medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluids;

an indicator unit and a syringe an access port disposed in fluid communication with said main tubing segment in branched relationship to each

Attorney Docket No: 1066

cther, said indicator unit adapted for indicating blood volume and said indicator

unit and said syringe access port defining branched bidirectional fluid flow

rathways;

a clamp operably engaging said main tubing segment for selectively

blocking and adapted to selectively block and unblock flow of the fluids in both

clirections through said main tubing segment; and

at least one air-permeable and liquid-impermeable membrane

provided in said indicator unit and allowing bidirectional fluid movement between

said indicator unit and said syringe port.

8. (Original) The device of claim 7 further comprising a blood volumeter

provided in said indicator unit.

9. (Original) The device of claim 7 wherein said indicator unit is disposed

in removable fluid communication with said main tubing segment.

10. (Previously presented) The device of claim 8 wherein said blood

volumeter is a volumeter chamber.

11. (Original) The device of claim 10 wherein said indicator unit is

-5-

Applicant: Patrice Flaherty Application No: 10/630,402 Filing Date: 07/30/2003 Attorney Docket No: 1066

disposed in removable fluid communication with said main tubing segment.

12. (Withdrawn) A device for collecting blood from and administering medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluids;

an indicator unit and a syringe port disposed in fluid communication with said main tubing segment in branched relationship to each other, said indicator unit adapted for indicating blood content;

a blood reservoir provided in fluid communication with said indicator unit; and

a clamp operably engaging said main tubing segment for selectively blocking said main tubing segment.

- 13. (Withdrawn) The device of claim 12 further comprising a blood volumeter provided in said indicator unit.
- 14. (Withdrawn) The device of claim 12 wherein said indicator unit is disposed in removable fluid communication with said main tubing segment.

Applicant: Patrice Flaherty

Filing Date: 07/30/2003

Attorney Docket No: 1066

15. (Withdrawn) The device of claim 13 wherein said blood volumeter is a

spiral tubing volumeter, a folded tubing volumeter or a volumeter chamber.

16. (Withdrawn) The device of claim 12 further comprising a protective

container provided in fluid communication with said indicator unit and wherein

said blood reservoir is contained in said protective container.

17. (Withdrawn) A device for collecting blood from and administering

medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical

fluids;

an indicator unit and a first syringe port disposed in fluid

communication with said main tubing segment in branched relationship to each

other, said indicator unit adapted for indicating blood content;

a second syringe port provided in fluid communication with said

indicator unit; and

a clamp operably engaging said main tubing segment for selectively

blocking said main tubing segment.

18. (Withdrawn) The device of claim 17 further comprising a cap device for

Filing Date: 07/30/2003 Attorney Docket No: 1066

removably engaging and sealing said second syringe port and an air-permeable membrane carried by said cap device.

19. (Withdrawn) The device of claim 17 further comprising a blood volumeter provided in said indicator unit.

20. (Withdrawn) The device of claim 19 wherein said blood volumeter is a spiral tubing volumeter, a folded tubing volumeter or a volumeter chamber.

21. (Withdrawn)  $\Lambda$  device for collecting blood from and administering racdical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluids;

a syringe port provided in fluid communication with said main tubing segment;

an expandible blood receptacle for removably engaging said syringe port in fluid communication with said main tubing segment; and

a clamp operably engaging said main tubing segment for selectively blocking said main tubing segment.

Applicant: Patrice Flaherty Application No: 10/630,402

Filing Date: 07/30/2003

Attorney Docket No: 1066

22. (Withdrawn) The device of claim 21 further comprising a blood

volumeter provided in fluid communication with said main tubing segment.

23. (Withdrawn) The device of claim 21 further comprising a second

syringe port provided in fluid communication with said main tubing segment and

wherein said syringe port and said second syringe port branch separately from said

main tubing segment.

24. (Currently amended) A device for collecting blood from and

administering medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical

fluids;

an indicator unit and a an access port disposed in fluid

communication with said main tubing segment in branched relationship to said

rnain tubing segment and each other at a tubing branch, said indicator unit having a

blood volumeter adapted for indicating blood volume and said indicator unit and

said access port defining branched fluid flow pathways;

a clamp operably engaging said main tubing segment and adapted to

crimp-and-selectively block and unblock flow of the fluids in both directions

through said main tubing segment;

Attorney Docket No: 1066

at least one air-permeable membrane provided in said indicator unit

in fluid communication with said blood volumeter; and

wherein said at least one air-permeable membrane allows

bidirectional fluid movement between and through said indicator unit and said

stringe access port.

25. (Previously presented) The device of claim 24 further comprising a

connector provided in fluid communication with said main tubing segment and

wherein said indicator unit is disposed in removable fluid communication with said

connector.

26. (Previously presented) The device of claim 24 wherein said blood

volumeter is a volumeter chamber.

27. (Previously presented) The device of claim 24 further comprising a

collector conduit provided in fluid communication with said main tubing segment

and wherein said indicator unit is disposed in fluid communication with said

collector conduit.

28. (Previously presented) The device of claim 27 wherein said indicator

Filing Date: 07/30/2003

Attorney Docket No: 1066

unit comprises a volumeter conduit provided in fluid communication with said

collector conduit and wherein said blood volumeter is provided in fluid

communication with said volumeter conduit.

29. (Previously presented) The device of claim 28 further comprising a port

disposed between said collector conduit and said volumeter conduit.

30. (Currently amended) The device of claim 24 further comprising a

syringe an access port tubing segment provided in fluid communication with said

main tubing segment and wherein said access port is provided on said syringe

access port tubing segment.

31. (Currently amended) The device of claim 24 further comprising a

connector provided in said main tubing segment between said clamp and said

indicator unit and said access port.

32. (Currently amended) The device of claim 1 wherein said tubing bifurcation

branch comprises a syringe an access port leg and a collector tubing leg communicating

with said main tubing segment and wherein said syringe access port communicates with

said syringe access port leg and said indicator unit communicates with said collector tubing
